Prevention

COVID-19 is a new virus that has spread across the world. It is caused by the SARS-CoV-2 virus. The virus is spread from person to person through droplets that are released when a person coughs or sneezes. It can also be spread through contact with a contaminated surface. The virus can cause a range of symptoms, from a mild cold to severe illness. It is important to take steps to prevent the spread of the virus, such as wearing a mask, avoiding large gatherings, and staying at home if you are sick.

There are several ways to prevent the spread of COVID-19. The most important is to wear a mask and avoid large gatherings. It is also important to stay at home if you are sick and to avoid contact with people who are sick. You should also avoid touching your face and avoid sharing items with others. If you must go out, you should avoid crowded places and avoid touching surfaces that many people have touched.

It is also important to practice good hygiene. This includes washing your hands frequently with soap and water for at least 20 seconds. You should also avoid touching your face and avoid sharing items with others. If you must go out, you should avoid crowded places and avoid touching surfaces that many people have touched.

There are also several ways to protect yourself from COVID-19. This includes wearing a mask, avoiding large gatherings, and staying at home if you are sick. You should also avoid contact with people who are sick and avoid touching your face. If you must go out, you should avoid crowded places and avoid touching surfaces that many people have touched.

Physical Health
